WHO WE ARE

Crita Creative LLP

Consulting-led technology partner

We combine strategy, product design and engineering to turn fragmented operations into connected systems people actually use. Every project starts with the business, not the brief.

Crita Creative LLP is a consulting-led technology partner. We design and build custom business platforms — for field teams, warehouses, scrap yards and finance — around the way each business actually works.

Industries served

07

Figures from crita.in.

WHAT WE BUILD

01

Operations platforms

Role-based systems that plan, run and audit work across field teams and the office.

SMC Task Management · Veloce Scrap Flow

02

Inventory & warehousing

Lots, barcodes, bins and ledgers that make every unit of stock traceable.

Veloce Scrap Flow · City Threads

03

Business intelligence

Dashboards that turn the systems you already use into clear decisions.

Clario · Veloce Scrap Flow

04

Applied AI

Assistants that answer from your own data, with sources — never invented numbers.

Clario

05

Mobile-first apps

Designed for one hand on the shop floor and in the field, packaged for Android.

SMC Task Management · Veloce Scrap Flow · City Threads

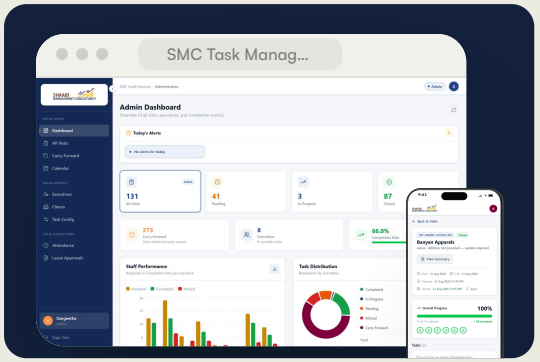

06

Multi-tenant foundations

Workspaces, roles, data isolation and audit trails, ready to scale.

Veloce Scrap Flow · Clario

Four platforms, each built around how the business actually works.

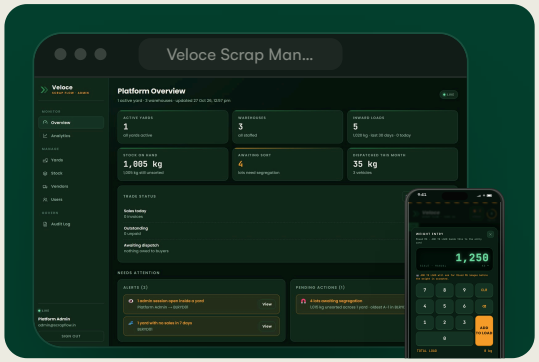

01

SMC Task Management

Shaabi Management Consultancy · Audit & consulting

Field audits, planned, run and closed in one system.

Page 04

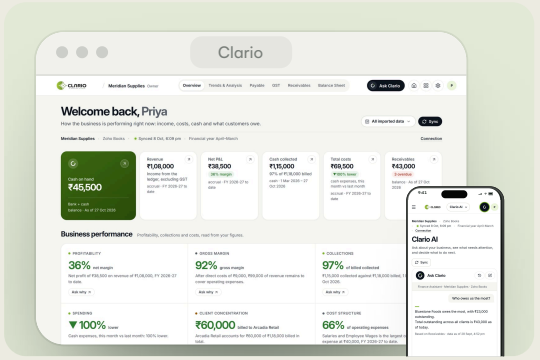

02

Veloce Scrap Flow

Veloce · Scrap & recycling

Every kilogram, from weighbridge to dispatch.

Page 11

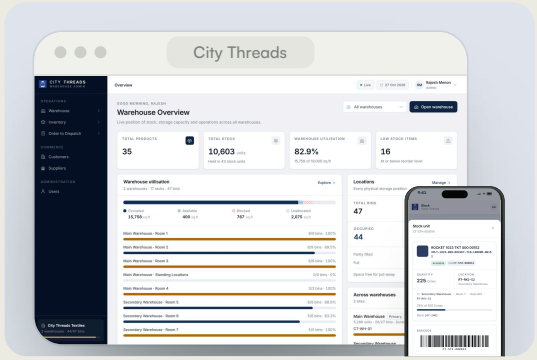

03

Clario

A Crita product · Business intelligence

Understand your business, not just your numbers.

Page 18

04

City Threads

City Threads Textiles · Textile distribution

Every lot, every bin, every dispatch — accounted for.

Page 25

01 — FIELD OPERATIONS PLATFORM

SMC Task Management

Field audits, planned, run and closed in one system.

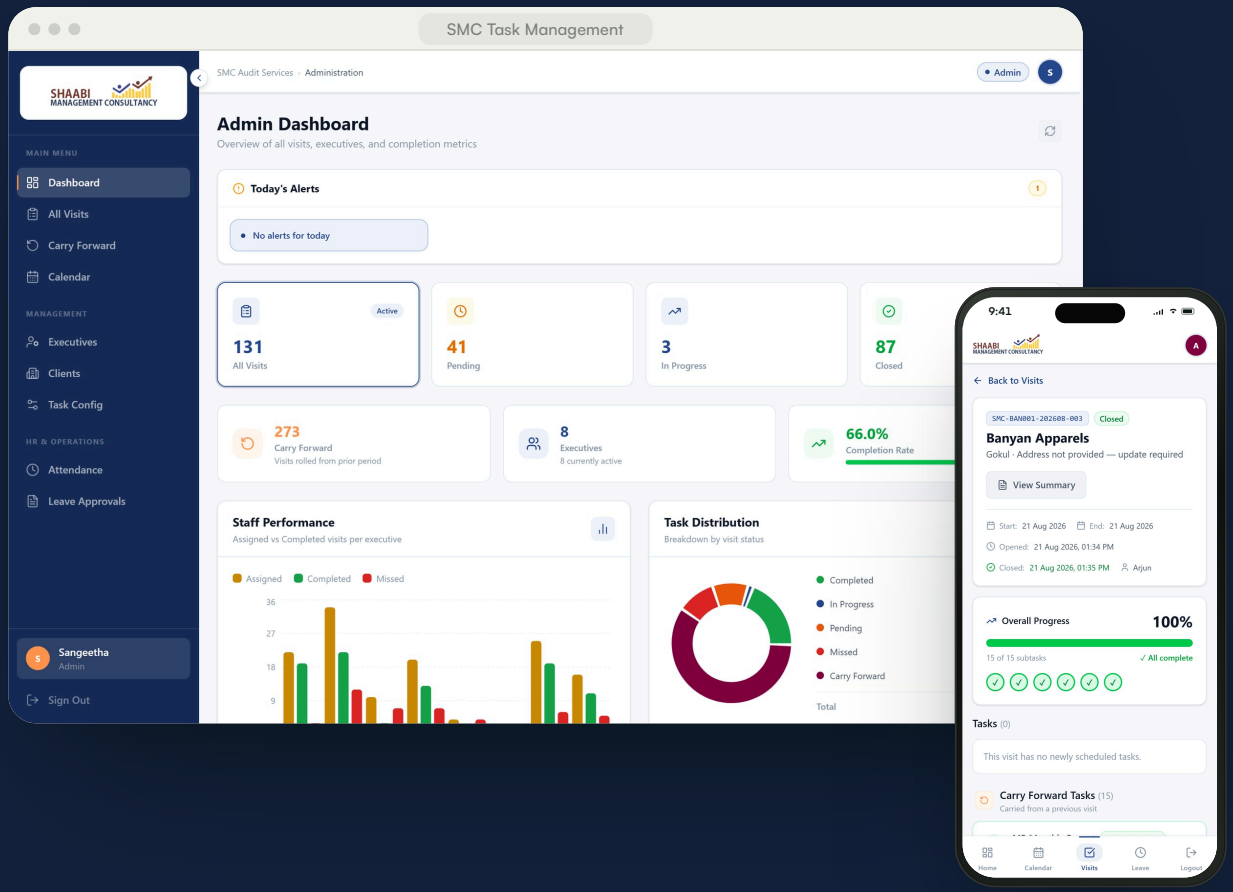

A field-audit operations platform for an audit consultancy. Admins plan visits and define each client's checklist; executives run every visit from their phone; nothing incomplete is lost between visits.

CLIENT
Shaabi Management Consultancy

SECTOR
Audit & consulting

PLATFORM
Web · Android

ROLES
Admin · Field Executive

THE CHALLENGE

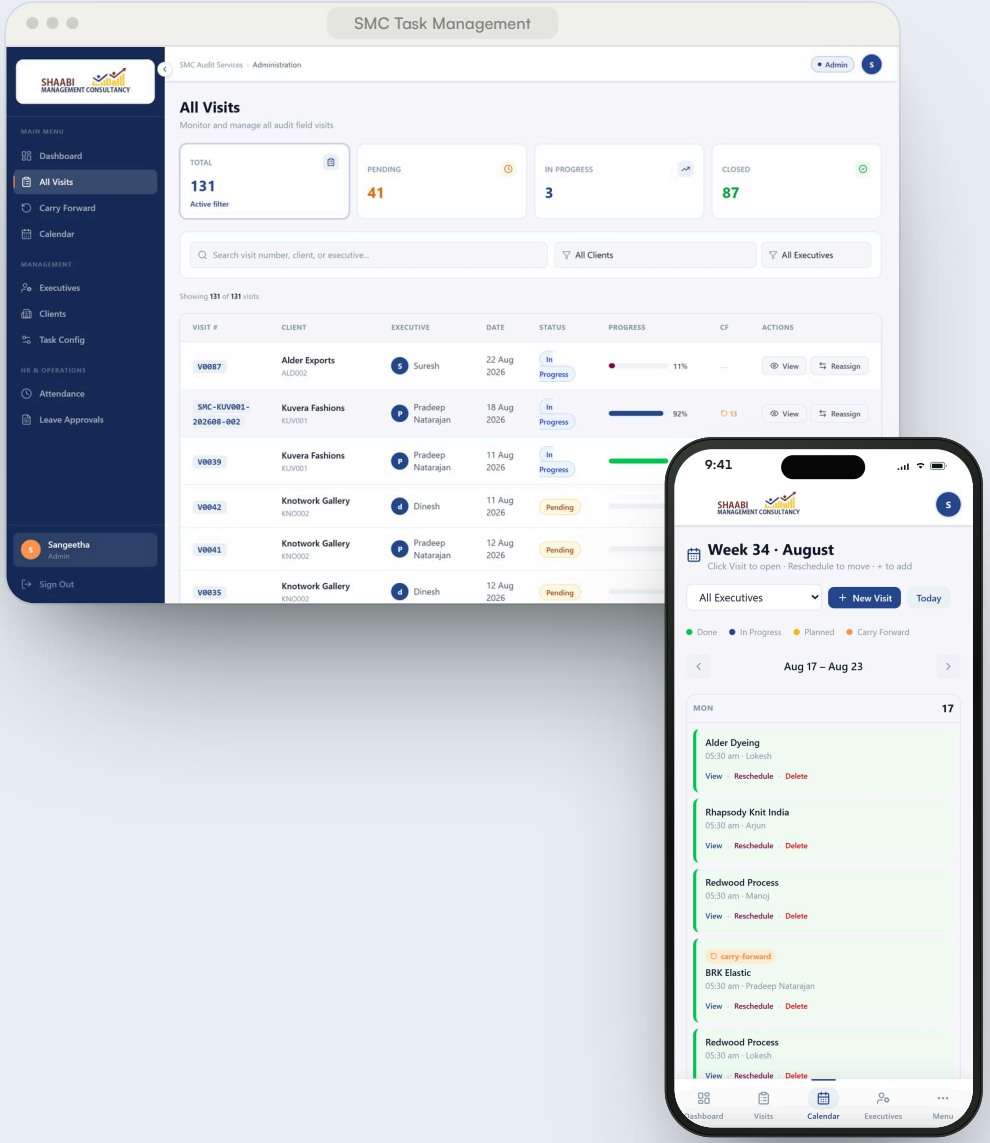

Weekly audits, dozens of clients, no single view.

SMC's executives visit client sites every week to verify operations, stock, accounts and reports — and every client needs a different checklist. Tracking was manual: unfinished items relied on memory to reach the next visit, and management had no live view of progress across the team.

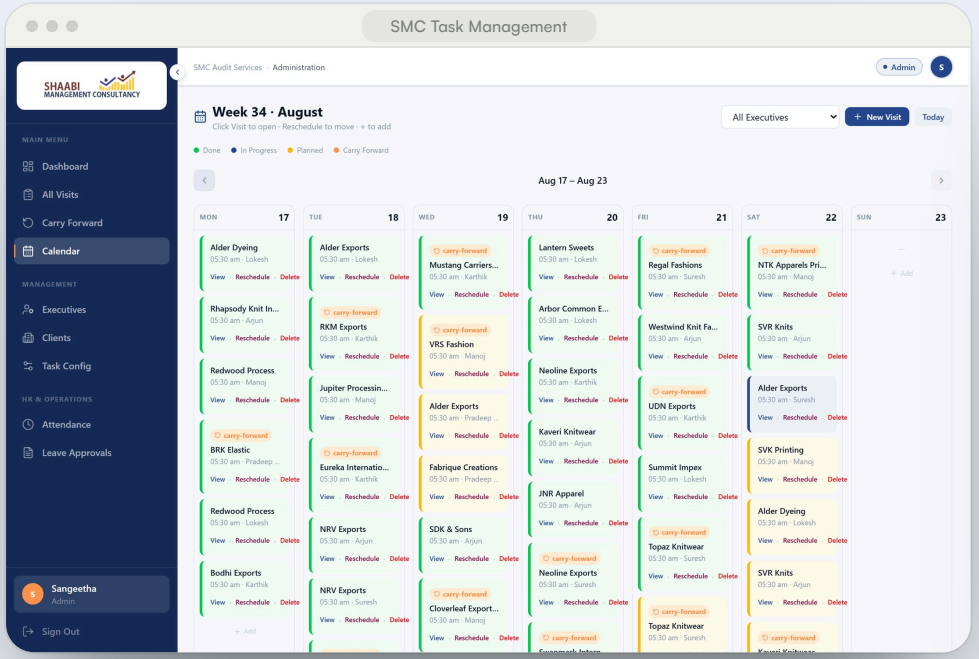

WHAT WE BUILT

One system, from the admin's calendar to the executive's phone.

Crita built a role-based platform that turns each audit visit into a structured, trackable workflow. Admins schedule visits and configure checklists per client. Executives open the visit on their phone, complete each item or record why it couldn't be done, and close it only when the rules are met. Unfinished work carries forward — with admin approval — into the next visit.

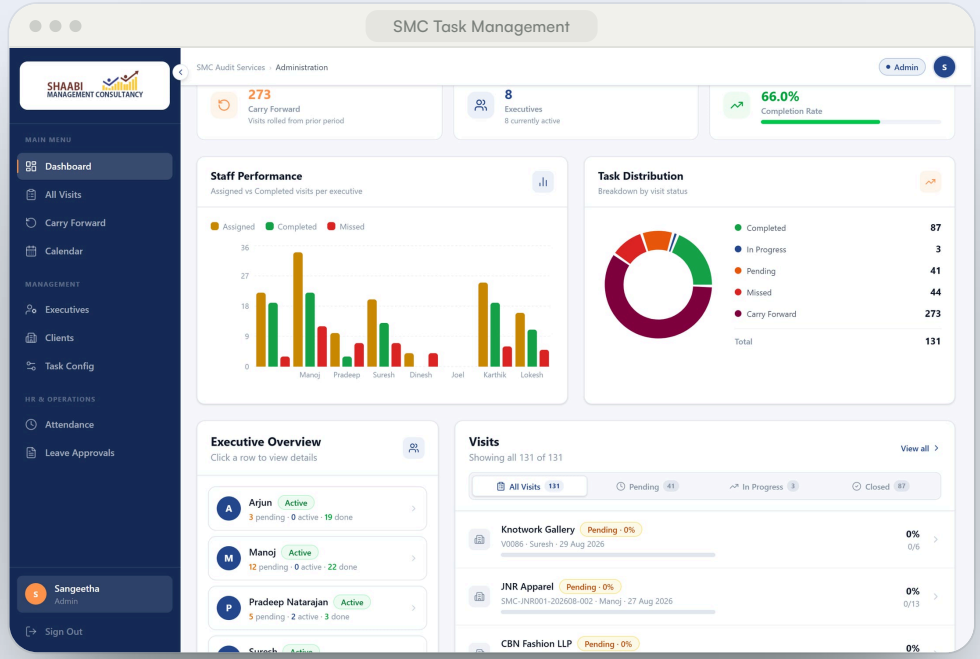

Inside SMC Task Management.

01

The week at a glance

Admins plan visits across the team in a weekly calendar — done, in progress, planned and carried forward, colour-coded.

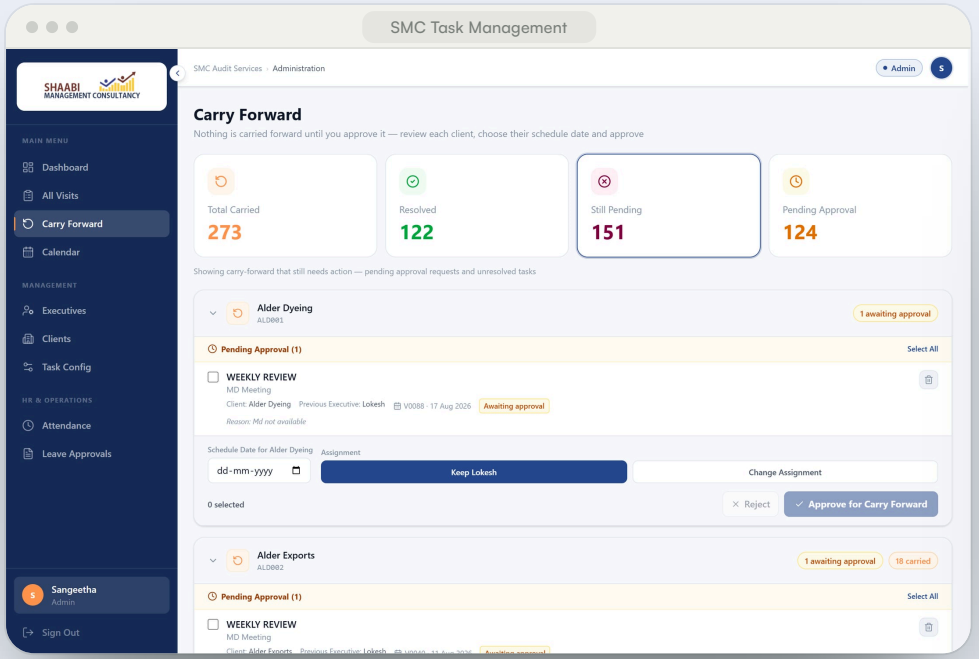

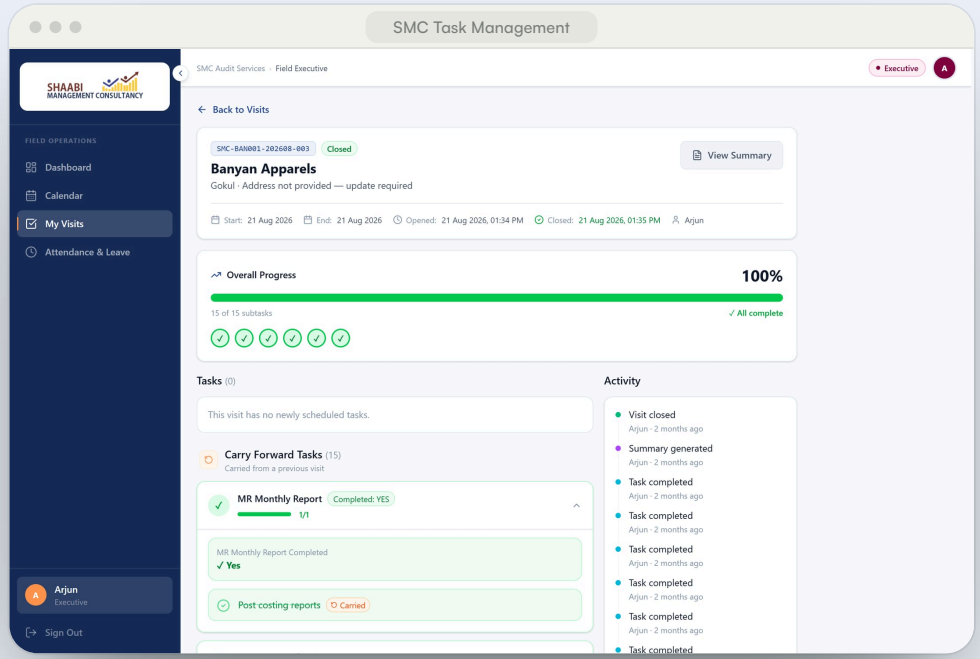

02

Live operational dashboard

Completion rate, staff performance and task distribution, with every executive's workload one click away.

Inside SMC Task Management.

03

Carry-forward, under control

Nothing moves to the next visit until an admin reviews it, chooses the schedule date and approves.

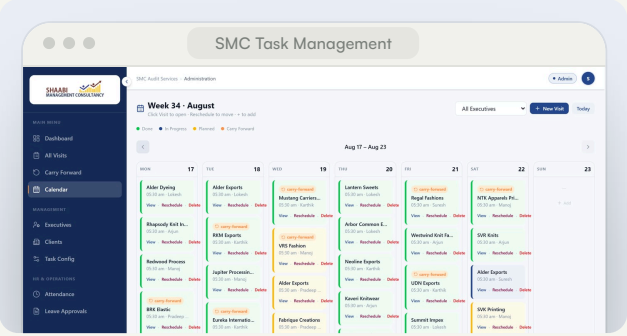

04

A visit, start to finish

Tasks, subtasks, carried items and an activity trail on one screen — then an automatic summary at closure.

KEY CAPABILITIES

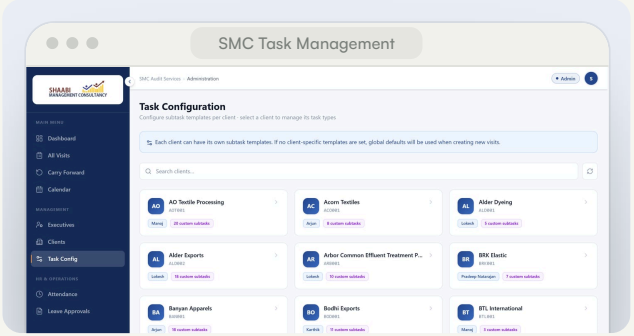

What SMC Task Management does.

01

Visit planning & calendar

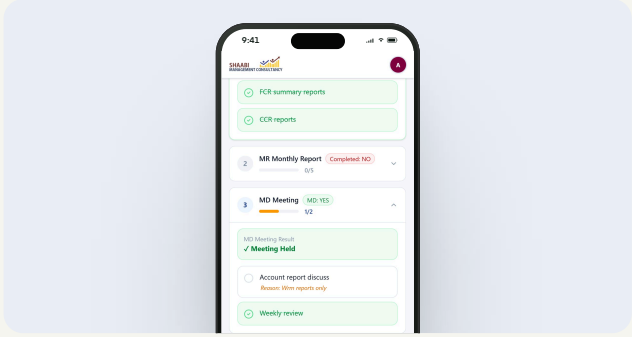

Schedule, reschedule and reassign visits across executives in a weekly calendar.

02

Client-specific checklists

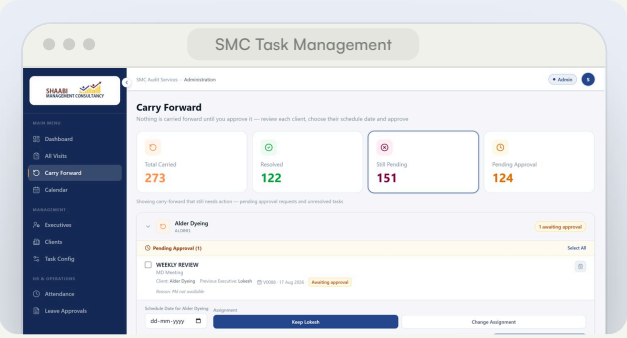

Each client gets its own task and subtask template, applied to every new visit automatically.

03

Rules that keep audits complete

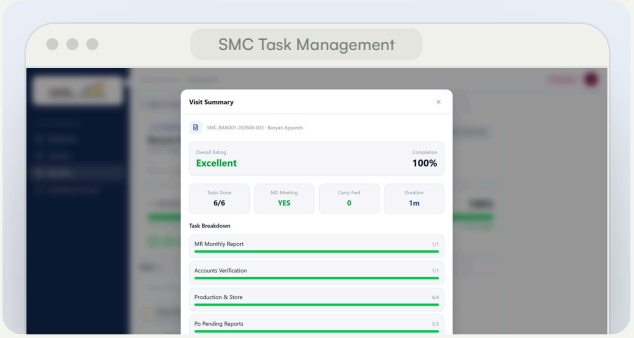

A visit closes only when required work is done. The MD meeting must be answered and every open item needs a reason.

04

Carry-forward with approval

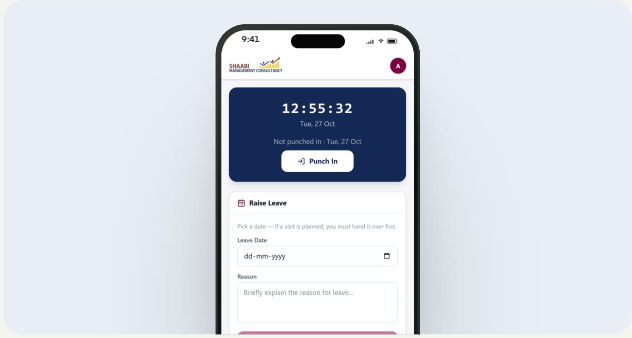

Unfinished items move into the next visit with their history — after an admin reviews and approves them.

05

Progress, trail and summary

Live progress per visit, a full activity trail and an automatic summary with a rating when the visit closes.

06

Attendance & leave

Executives punch in and request leave from the app; admins review attendance and approve requests.

ROLE-BASED EXPERIENCE

Built for every role.

DESKTOP & MOBILE

Admin

Plans the week and keeps every visit on track.

- Dashboard of visits, completion rate and staff performance
- Weekly calendar for scheduling and reassignment
- Carry-forward approvals and client checklists
- Executive workload, attendance and leave

MOBILE-FIRST

Field Executive

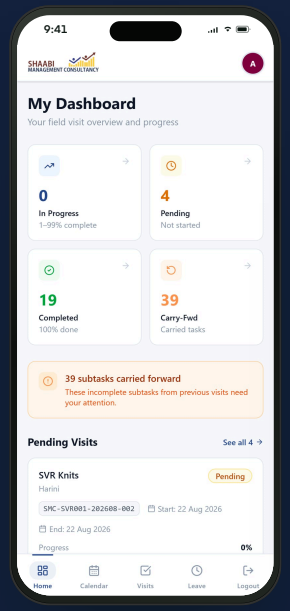

Runs each visit on site, from the phone.

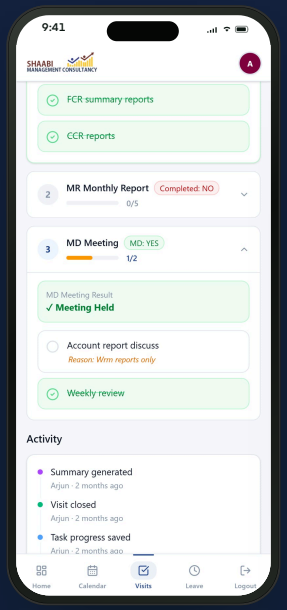

- Pending visits and carried-forward items at a glance
- Checklist per task, with reasons for open items
- MD meeting confirmation before closing
- Punch in, punch out and leave requests

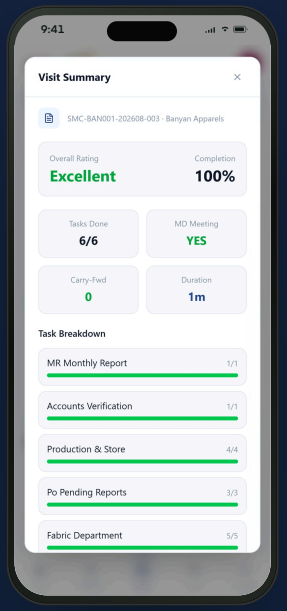

RESPONSIVE EXPERIENCE

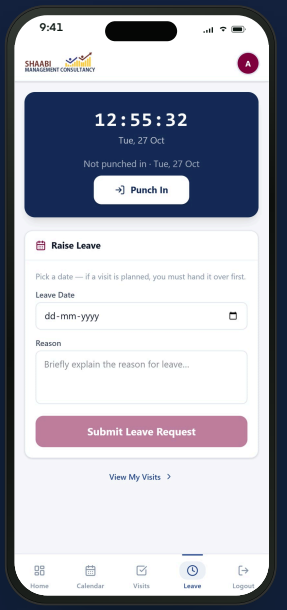

Planned at the desk. Run in the field.

Executives run every visit from their phone — checklists, reasons, summaries, attendance. Admins get the same live picture on desktop and mobile.

BUSINESS VALUE

What it changes for the business.

Live visibility

Management sees the status of every visit and executive without chasing calls.

Nothing slips between visits

Unfinished items carry forward with their reason, so follow-ups are never lost.

Consistent audits

Client-specific checklists and closing rules make every visit complete and comparable.

Less manual reporting

Progress and visit summaries are produced by the system, not compiled by hand.

TECHNOLOGY & DELIVERY

Next.js · TypeScript · PostgreSQL · Prisma · Role-based access · Android app

- Mobile-first web app with an Android build for field executives
- Executives only ever see the visits assigned to them
- Lean data and instant checklist feedback on mobile networks

02 — YARD OPERATIONS & INVENTORY PLATFORM

Veloce Scrap Flow

Every kilogram, from weighbridge to dispatch.

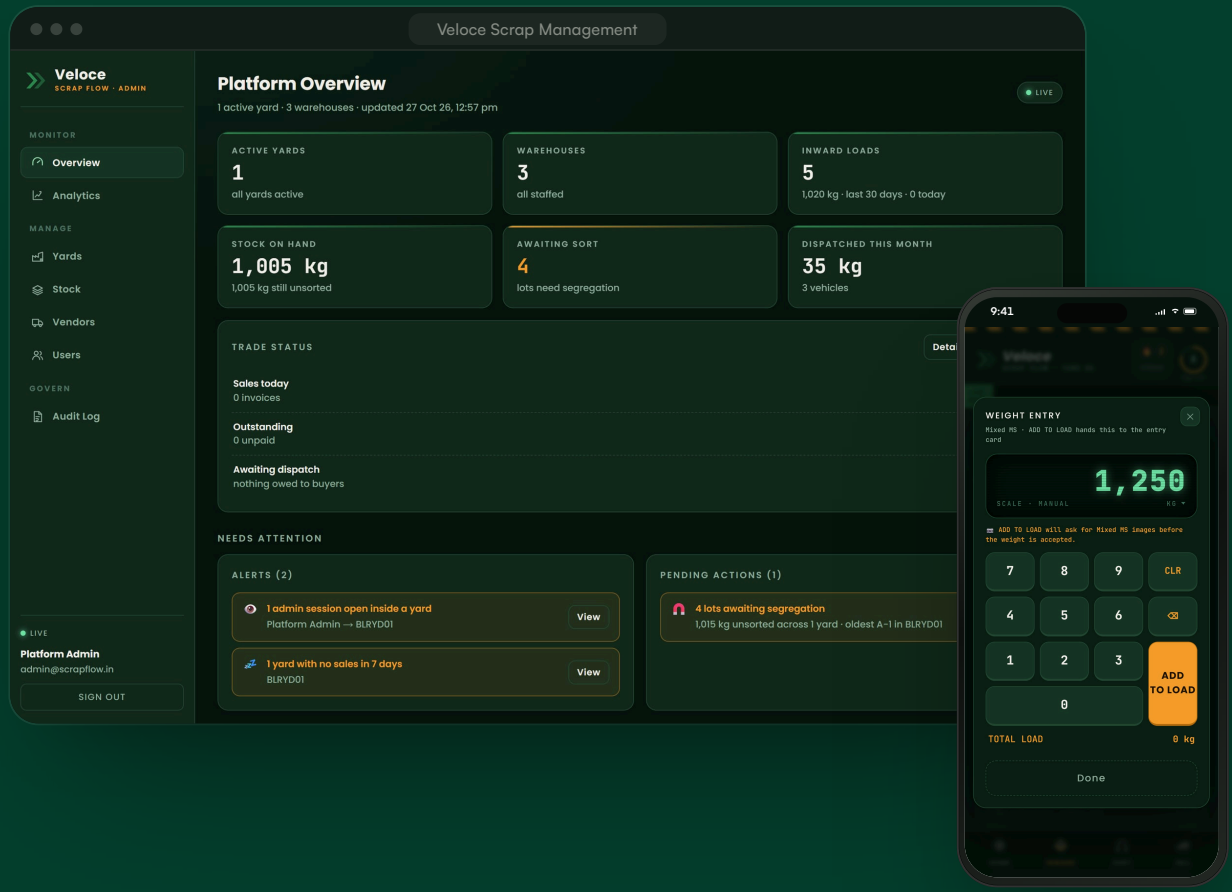

A yard operating system for a scrap business: a calculator-fast mobile app for the weighbridge and the sorting floor, and a desktop console that gives management live control across yards and warehouses.

CLIENT
Veloce

SECTOR
Scrap & recycling

PLATFORM
Web • Android

ROLES
Admin • Owner • Supervisor

THE CHALLENGE

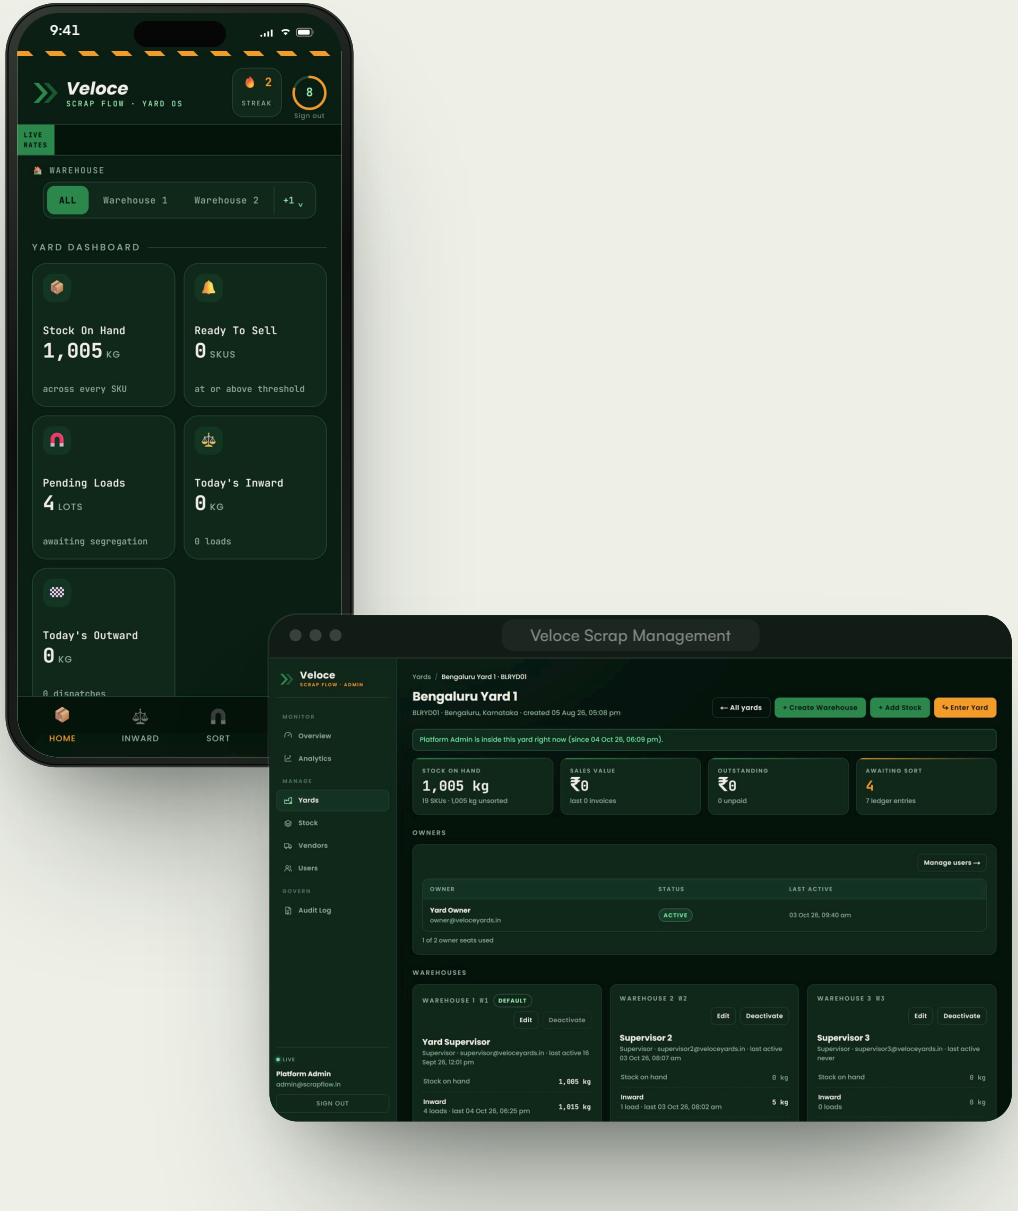

Mixed loads in. Graded material out. No reliable trail in between.

A scrap yard buys mixed material by weight, sorts it into sellable grades and sells it by the truckload. Every step changes the numbers. Without one system, it is hard to know what is in stock, what is waiting to be sorted and what has actually left the yard — and impossible to see it across several yards.

WHAT WE BUILT

Built for the yard floor. Controlled from one console.

Crita built Scrap Flow as a multi-yard platform. Owners and supervisors work in a mobile app designed like a calculator — big keys, live rates, clear steps — while the platform admin manages yards, warehouses, users and analytics from a desktop console. Every action writes to one inventory ledger, updated in real time.

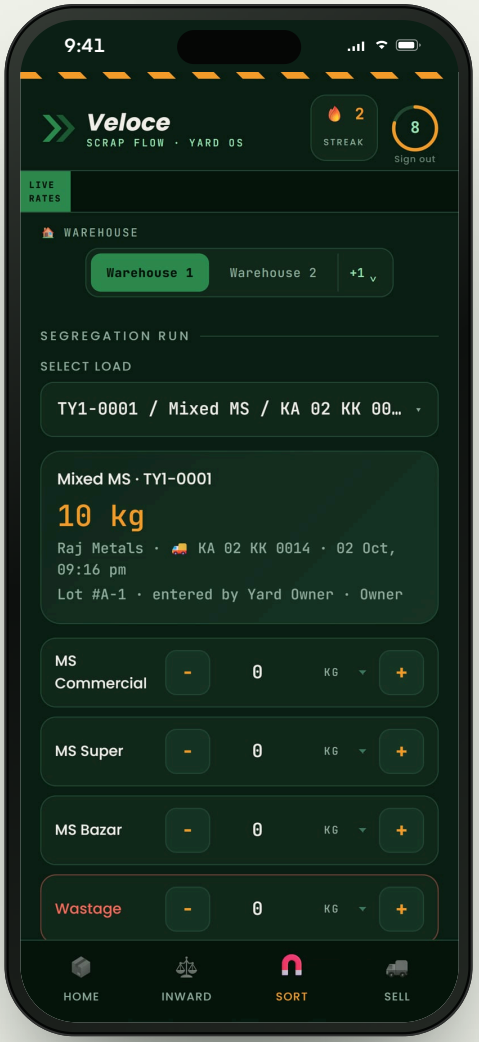

Inside Veloce Scrap Flow.

01

Weight entry, calculator-fast

Big keys, a live LED display and kg / ton / tonne switching — built for gloved hands at the weighbridge.

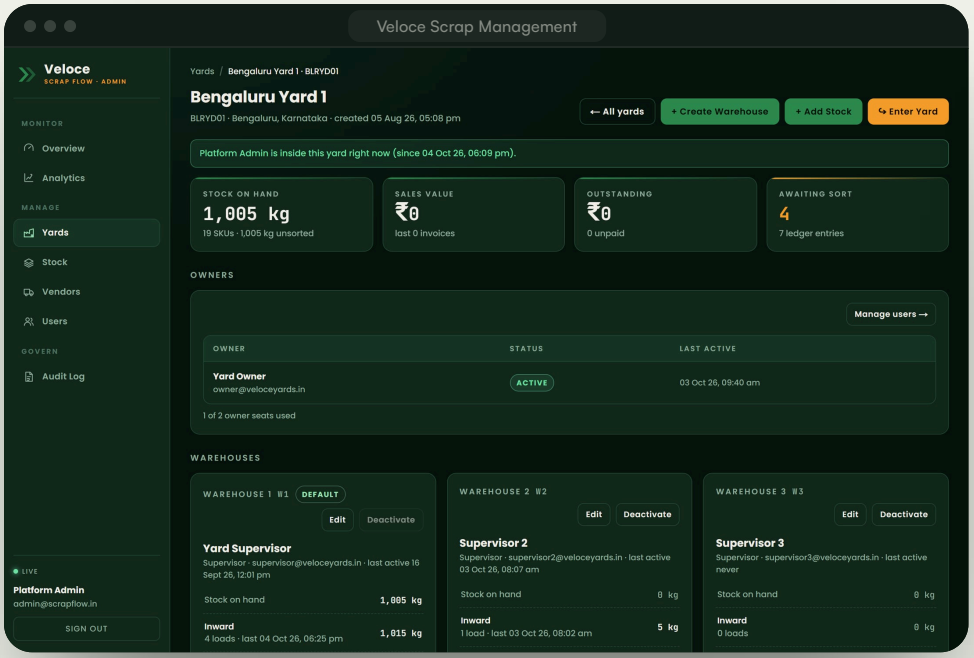

02

Segregation that balances

Pick a mixed lot and split it into grades and wastage. Vendor, vehicle and lot history stay attached.

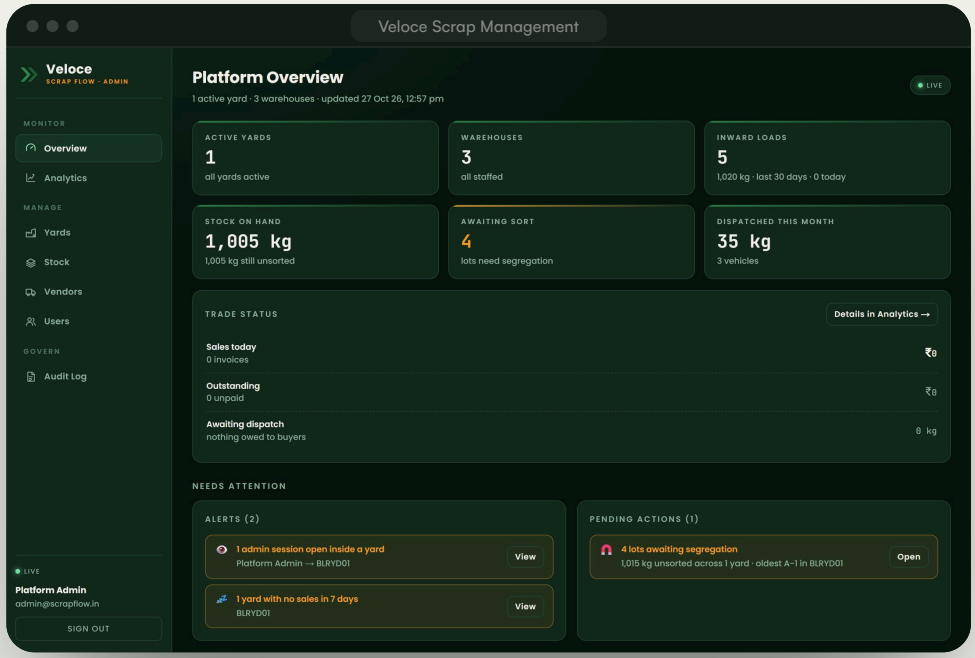

Inside Veloce Scrap Flow.

03

One console for every yard

Warehouses, supervisors, stock and records for each yard — with the admin able to step inside any yard.

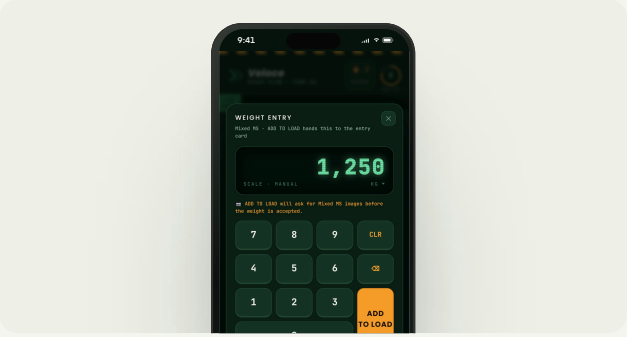

04

Platform overview

Headline numbers, alerts and pending actions computed by the system, so nothing waits to be noticed.

KEY CAPABILITIES

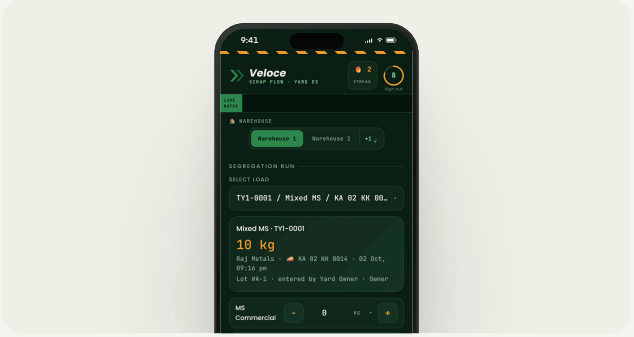

What Veloce Scrap Flow does.

01

Inward at the weighbridge

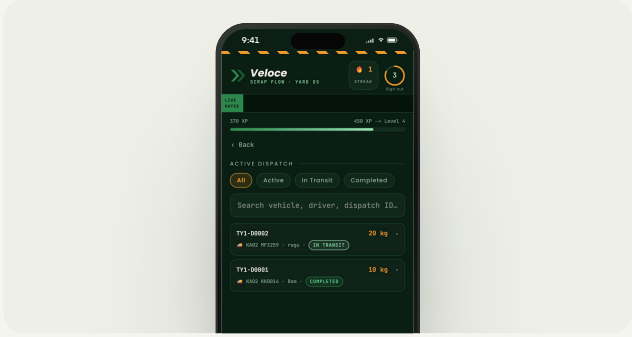

Vendor, vehicle and multiple weighments on an LED-style keypad, with photo evidence. Each load becomes a traceable lot.

02

Sorting that balances

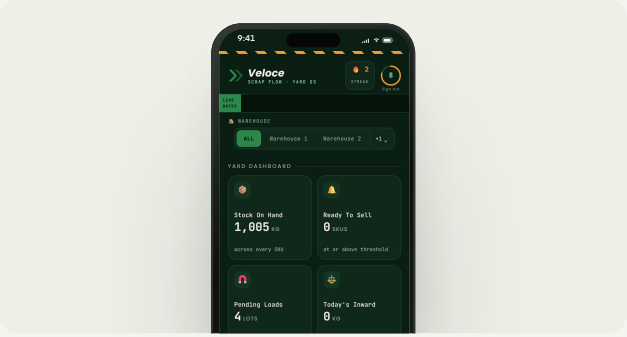

Mixed lots are split into finished grades and wastage; a run can't close until every kilogram is accounted for.

03

Sell, allocate, dispatch

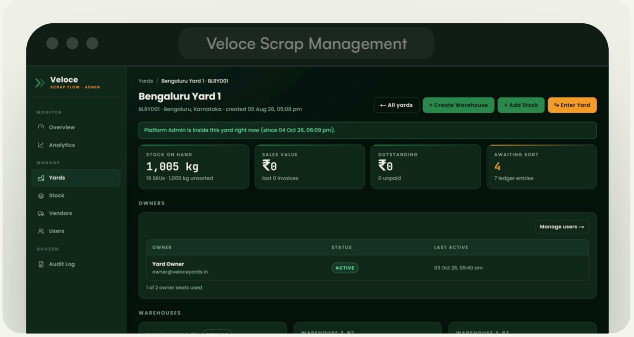

A sale reserves stock; supervisors load vehicles against it. The same kilograms can't be sold twice or over-dispatched.

04

Live stock across warehouses

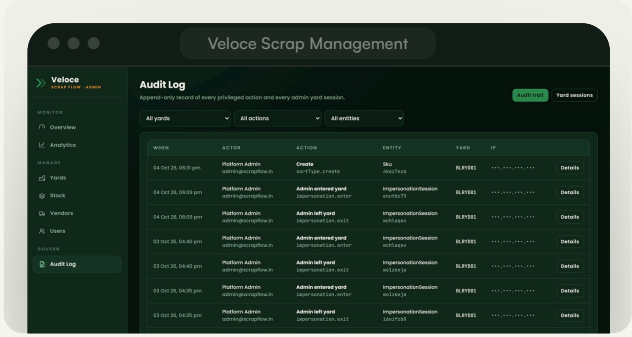

Stock on hand, sale thresholds and pending work per yard and warehouse, updated as it happens.

05

Admin console & analytics

Yards, warehouses, users and permissions, with analytics for inward, sorting, dispatch and materials.

06

Governance built in

Every privileged action is recorded in an audit log with before-and-after values.

ROLE-BASED EXPERIENCE

Built for every role.

DESKTOP CONSOLE

Admin

Runs the platform across yards.

- Platform overview with alerts and pending actions
- Yards, warehouses and supervisor assignments
- Users, roles and access
- Analytics and a full audit log

MOBILE APP

Owner

Runs the yard and the trade.

- Yard dashboard: stock, ready-to-sell and pending lots
- Inward, sorting and materials
- Sales, invoices and receivables
- Dispatch status per invoice

MOBILE APP

Supervisor

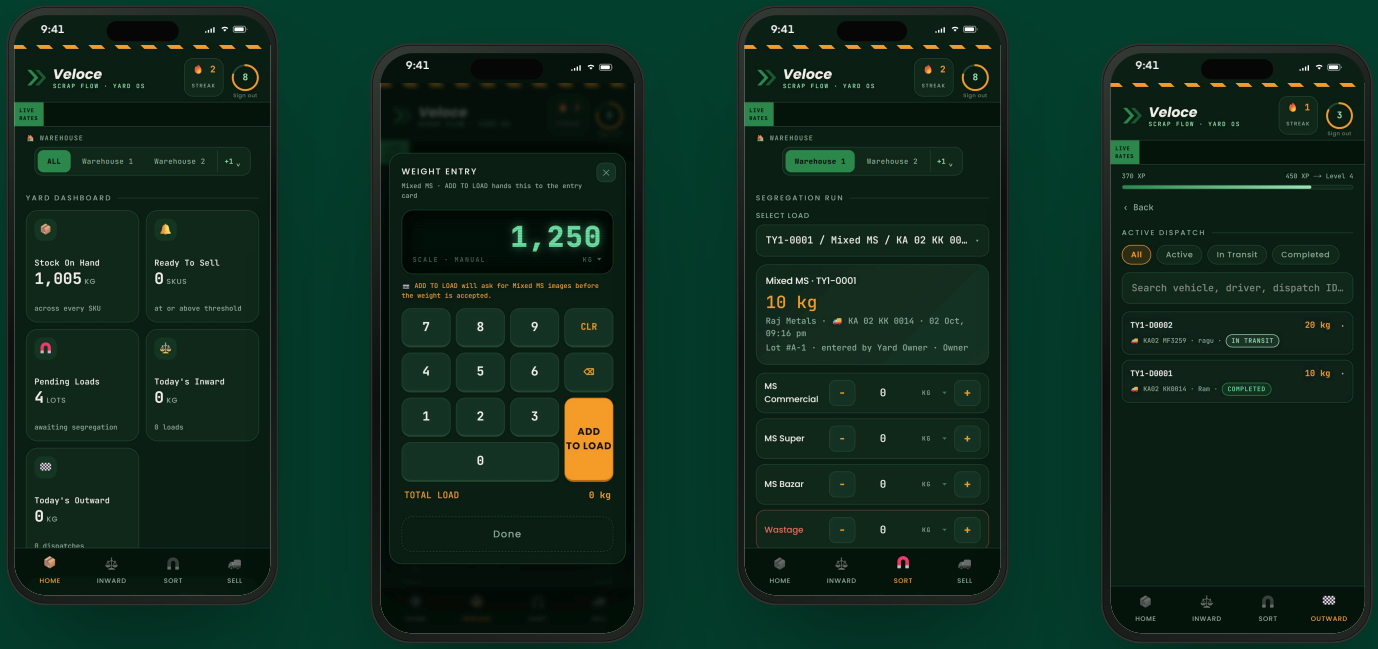

Runs the floor in an assigned warehouse.

- Materials on hand by category
- Inward and sorting
- Loading vehicles against allocations
- Dispatch history

RESPONSIVE EXPERIENCE

Designed like a calculator, for the yard floor.

Big keys, high contrast, live rates and one clear step at a time — so weighments, sorting and dispatch are recorded where they happen.

BUSINESS VALUE

What it changes for the business.

Control without being on site

Owners and admins see stock, pending sorting and dispatch status the moment they change.

Traceable from vendor to buyer

Lots keep their vendor through sorting and dispatch, so every kilogram has a history.

Mistakes prevented, not corrected

Rules block double-selling, over-dispatch and unbalanced sorting before they happen.

Ready for more yards

A multi-yard architecture with strict data isolation between yards.

> “We didn’t need another digital tool; we needed a technology partner who understood how our business worked. CRITA helped us simplify processes, connect different parts of the business, and introduce technology where it could create real value.”
>
> **Abhirup** · Veloce

TECHNOLOGY & DELIVERY

Next.js · TypeScript · PostgreSQL · Real-time updates · Multi-tenant architecture · Android app

- 2,500+ automated checks across 36 test suites
- Yard data isolated at session, query and database level
- Number-plate recognition built as a separate computer-vision service (YOLOv8 + PaddleOCR)

03 — BUSINESS-INTELLIGENCE PLATFORM

Clario

Understand your business, not just your numbers.

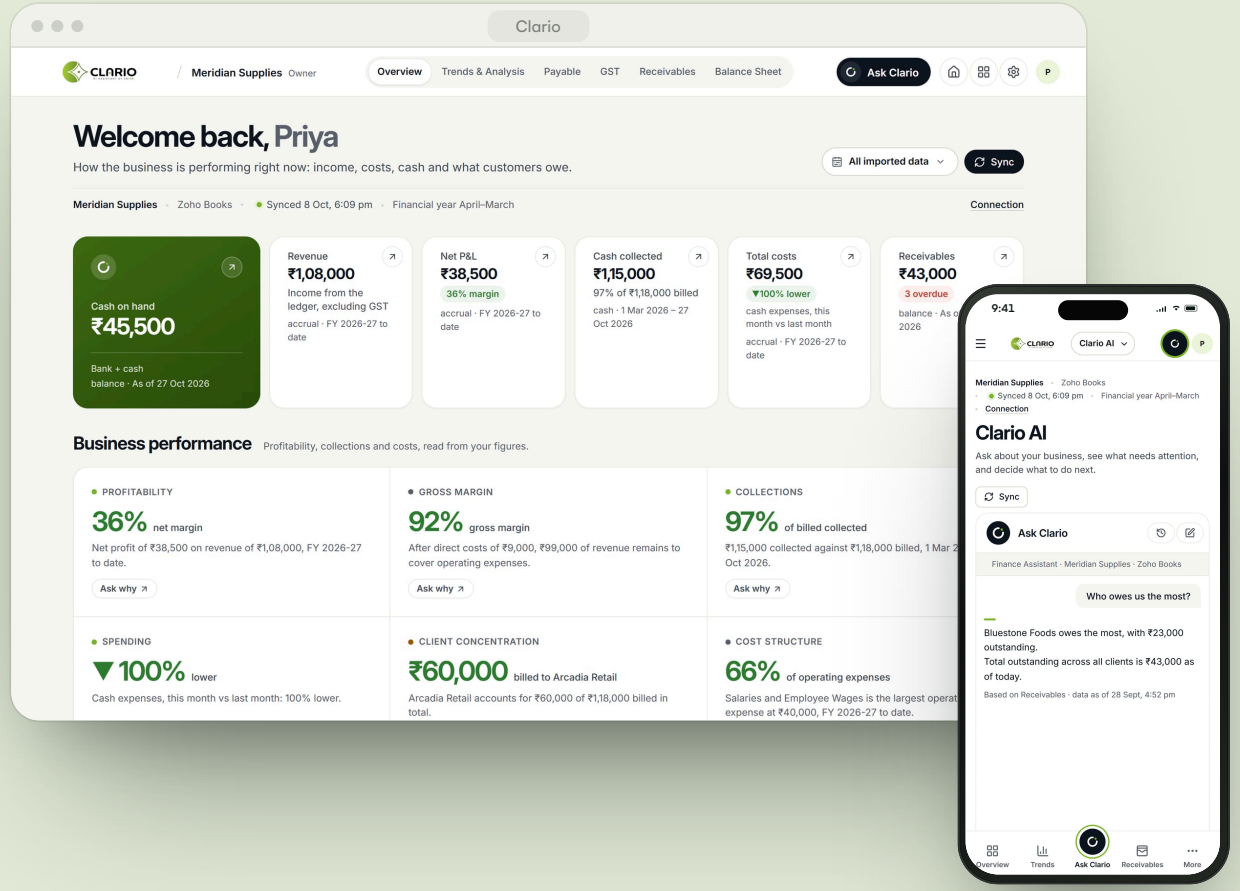

Crita's own business-intelligence platform. Clario connects to the systems a business already uses — starting with Zoho Books — and turns them into a clear finance command centre, with an assistant that answers in plain words, from the books.

CLIENT
A Crita product

SECTOR
Business intelligence

PLATFORM
Web • Responsive

ROLES
Workspace owners & members

THE CHALLENGE

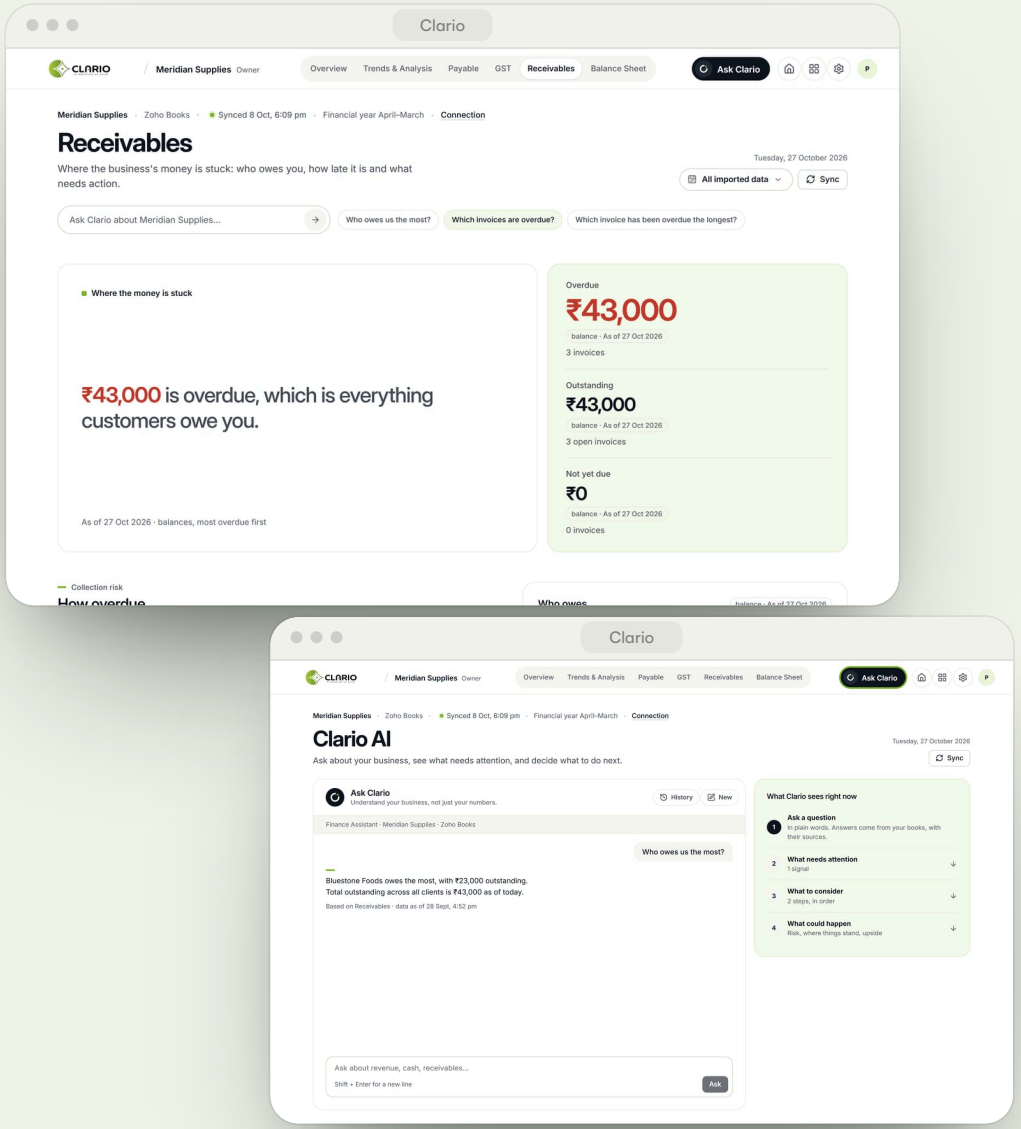

The numbers exist. The answers don’t.

Growing businesses keep their figures in accounting software, but turning ledgers into decisions takes reports, spreadsheets and an accountant’s time. Generic AI tools can’t be trusted with financial figures — and every new system adds another place to look.

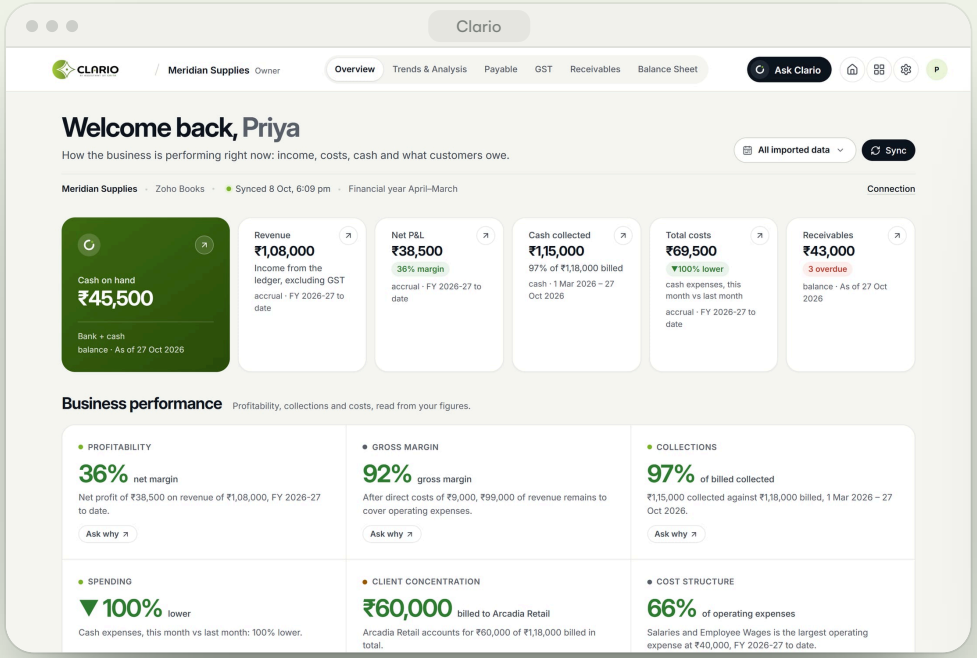

WHAT WE BUILT

Connect once. See clearly. Ask anything.

Clario gives each client a private workspace. They connect Zoho Books securely, and Clario turns the data into a finance command centre — overview, trends, receivables, payables and balance sheet. Ask Clario answers questions in plain words using the same figures as the reports, and shows where each answer comes from.

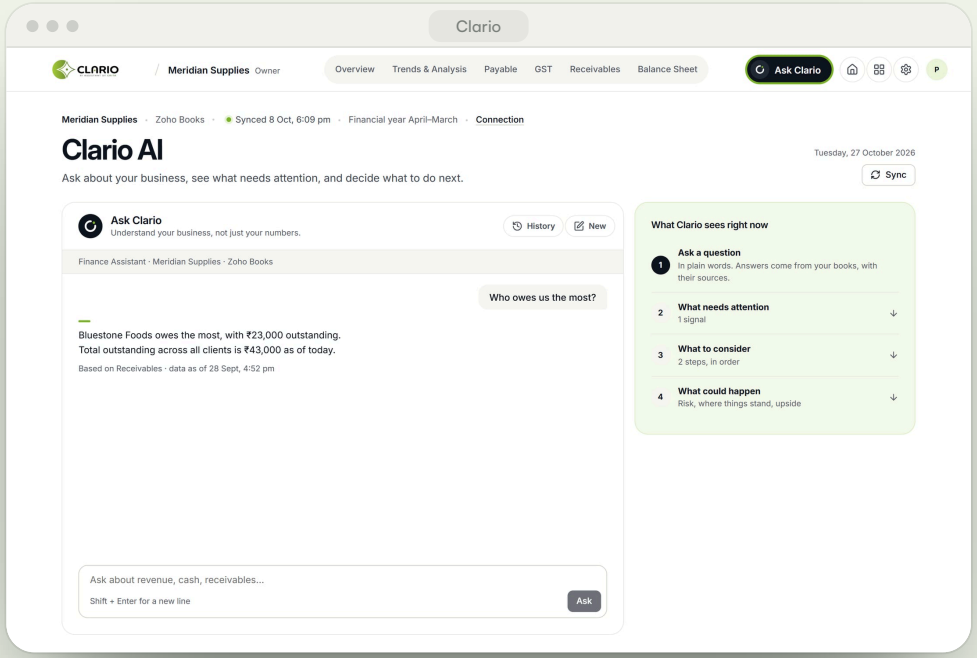

Inside Clario.

01

The business on one screen

Cash on hand, revenue, profit, collections and receivables — each with its basis and as-of date.

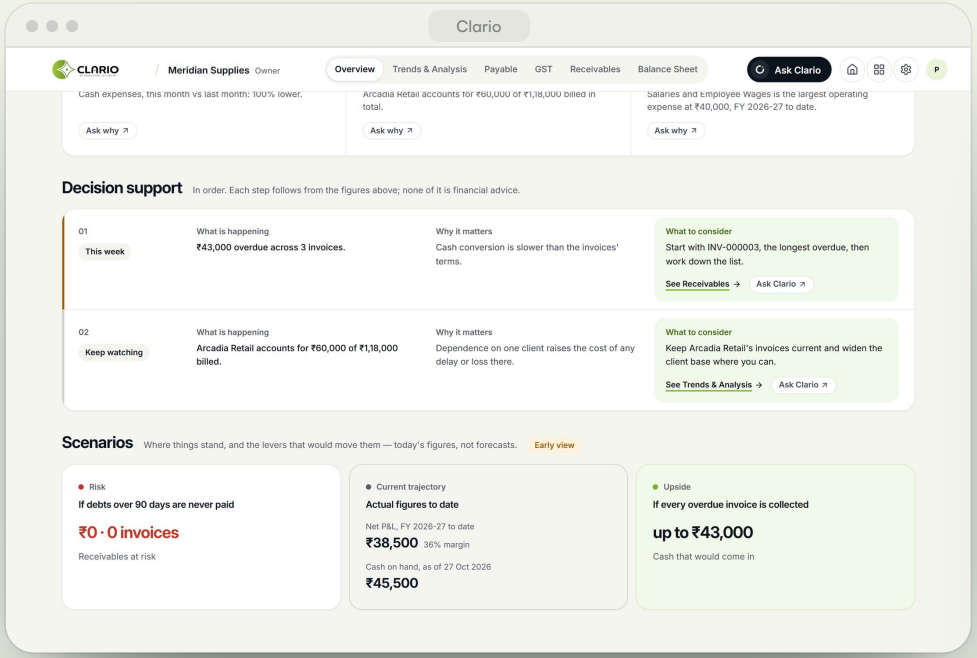

02

Answers, with sources

Ask in plain words. Every answer uses the same figures as the reports and says where they came from.

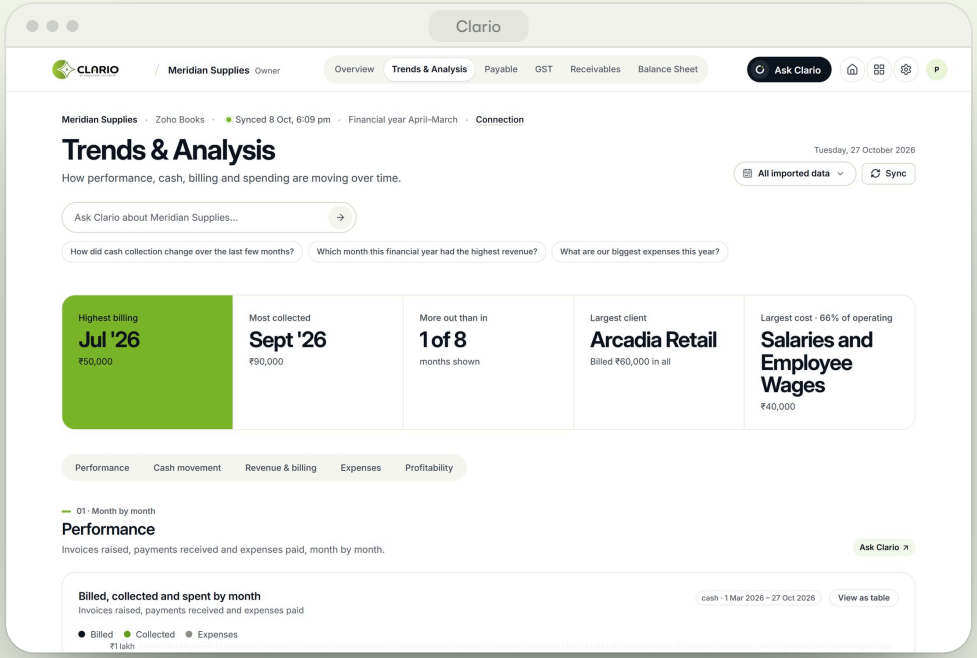

Inside Clario.

03

What to do next

Signals and decision support turn the figures into an ordered list of what deserves attention.

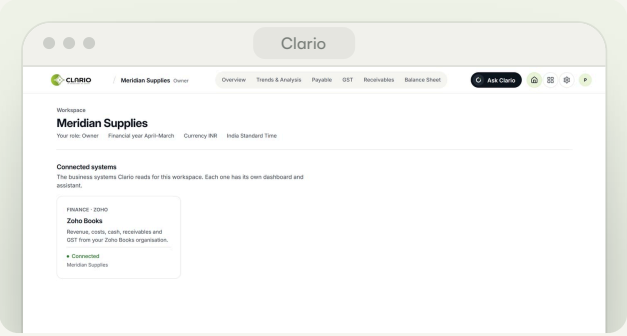

04

Trends that explain themselves

Billing, collections and spending month by month — every chart with a table view.

KEY CAPABILITIES

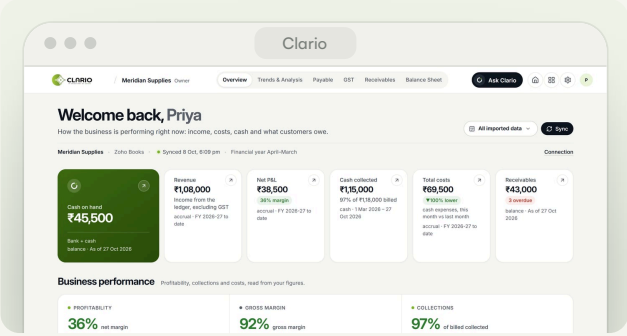

What Clario does.

01

Secure connection

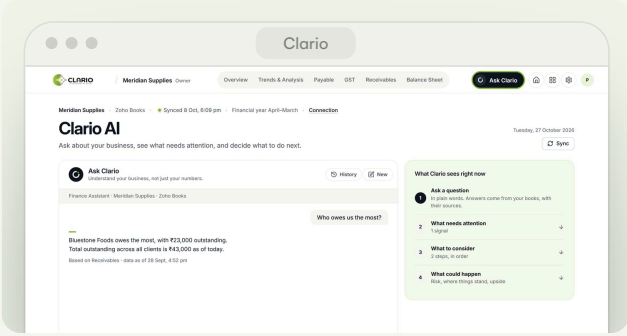

Zoho Books connects through OAuth with read-only access, into the client's own workspace.

02

Finance overview

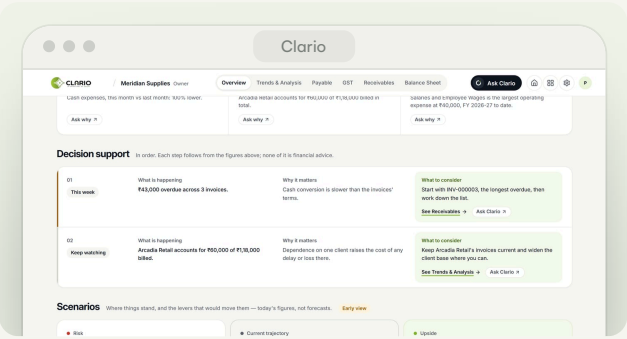

Cash, revenue, profit, collections, costs and receivables on one screen, with performance signals.

03

Ask Clario

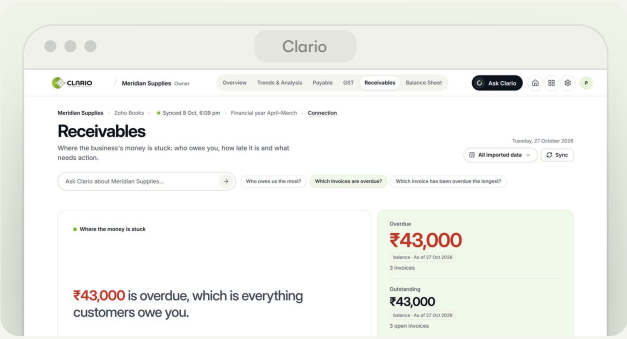

Plain-language questions answered from the books, with the source and date of every figure.

04

Decision support

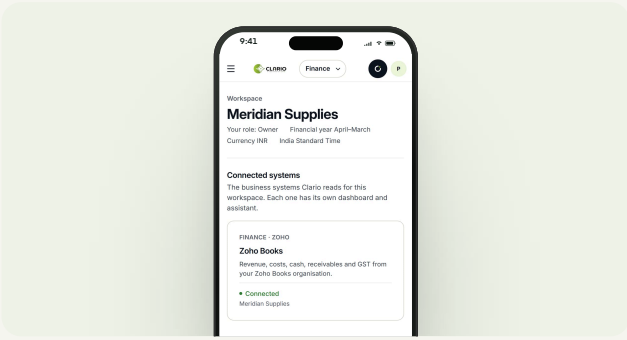

What needs attention, what to consider next and simple scenarios — clearly labelled as guidance.

05

Trends & receivables

Month-by-month billing, collections and spending; overdue ageing and a full invoice register.

06

Workspaces & roles

Every client works in an isolated workspace with its own members and connected systems.

PLATFORM ARCHITECTURE

One platform, many connected systems.

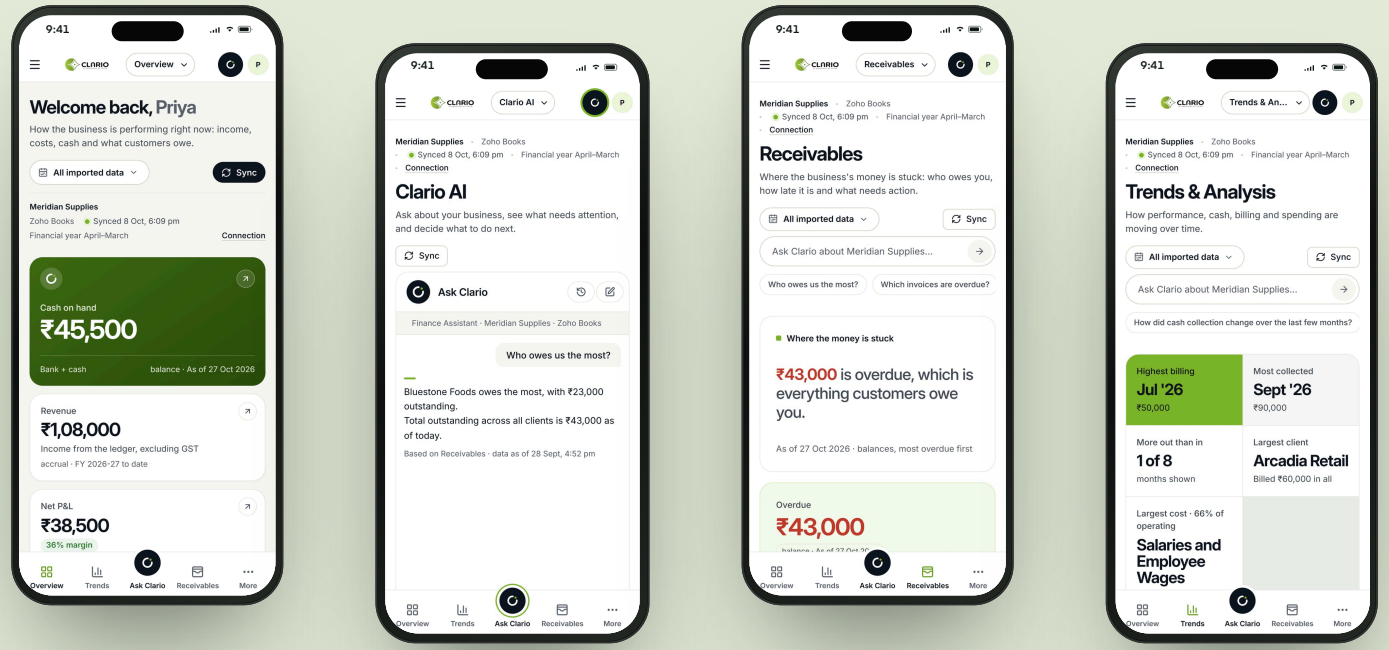

Figures are calculated in code; the AI explains them. Each assistant only answers from its own domain's data.

CONNECTORS	Zoho Books LIVE	Tally IN DEVELOPMENT	Inventory systems PLANNED	Lead management PLANNED
DOMAINS	Finance LIVE	Inventory PLANNED	Leads PLANNED	
EXPERIENCE	Command centre LIVE	Ask Clario assistant LIVE		
PLATFORM	Workspaces, roles & isolation LIVE			

RESPONSIVE EXPERIENCE

The whole command centre, in your pocket.

Every view — including Ask Clario — adapts to a phone, so owners can check cash or chase receivables between meetings.

BUSINESS VALUE

What it changes for the business.

Clarity without reports

Owners see performance, cash and receivables without building spreadsheets.

Answers you can trust

Every figure traces back to the books, with its date.

Guidance, in order

Signals and next steps turn numbers into a short list of decisions.

Built to grow

Each new system Crita connects becomes another module on the same platform.

TECHNOLOGY & DELIVERY

React · TypeScript · Python API · PostgreSQL · Zoho Books API · LLM with scoped tools

- Deterministic finance calculations — the assistant explains figures, never invents them
- Server-side OAuth with encrypted tokens
- Workspace isolation enforced on the server

04 — WAREHOUSE & INVENTORY MANAGEMENT

City Threads

Every lot, every bin, every dispatch — accounted for.

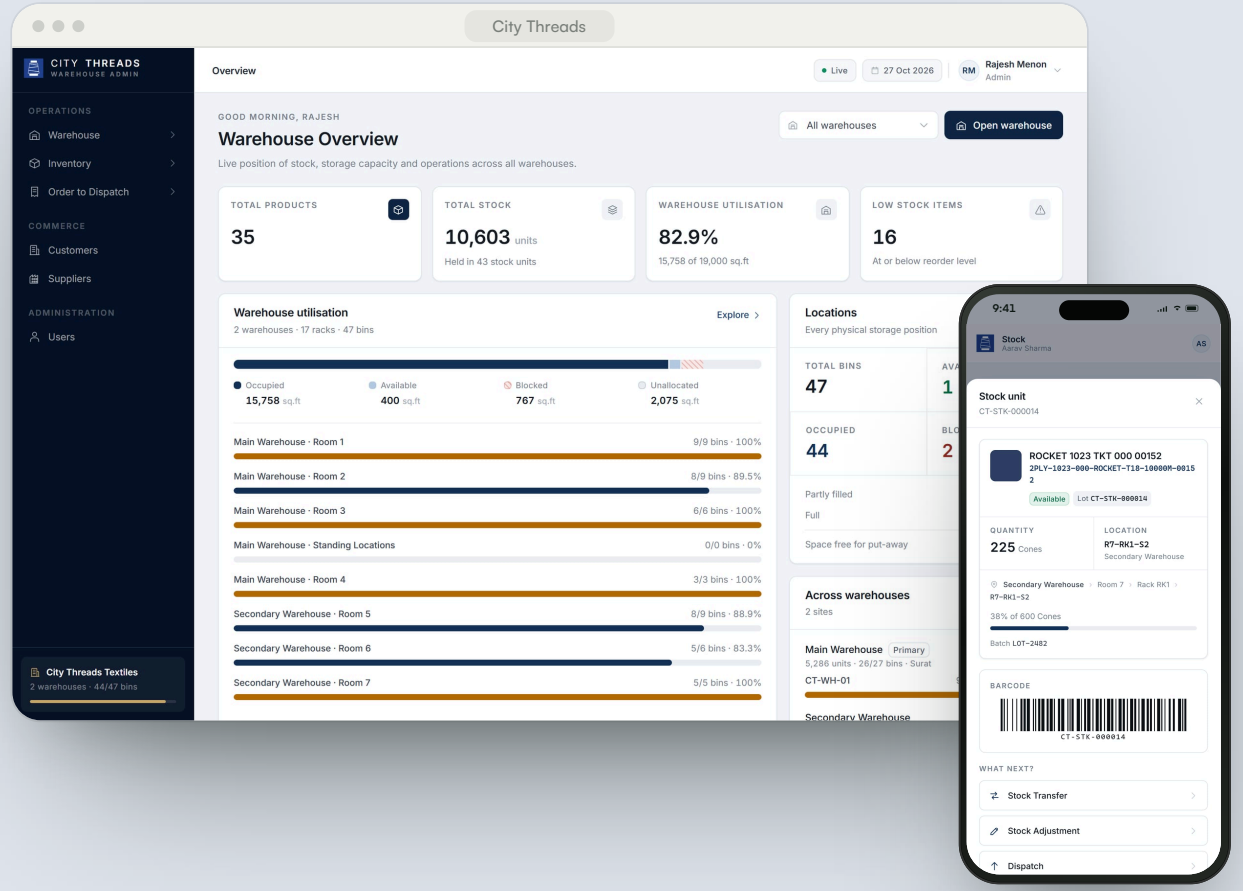

A warehouse management system for a textile distributor: barcoded stock units, a visual map of every rack and bin, and an order-to-dispatch flow — with a one-handed phone app for the warehouse floor.

CLIENT
City Threads Textiles

SECTOR
Textile distribution

PLATFORM
Web · Android

ROLES
Administrator · Warehouse Executive

THE CHALLENGE

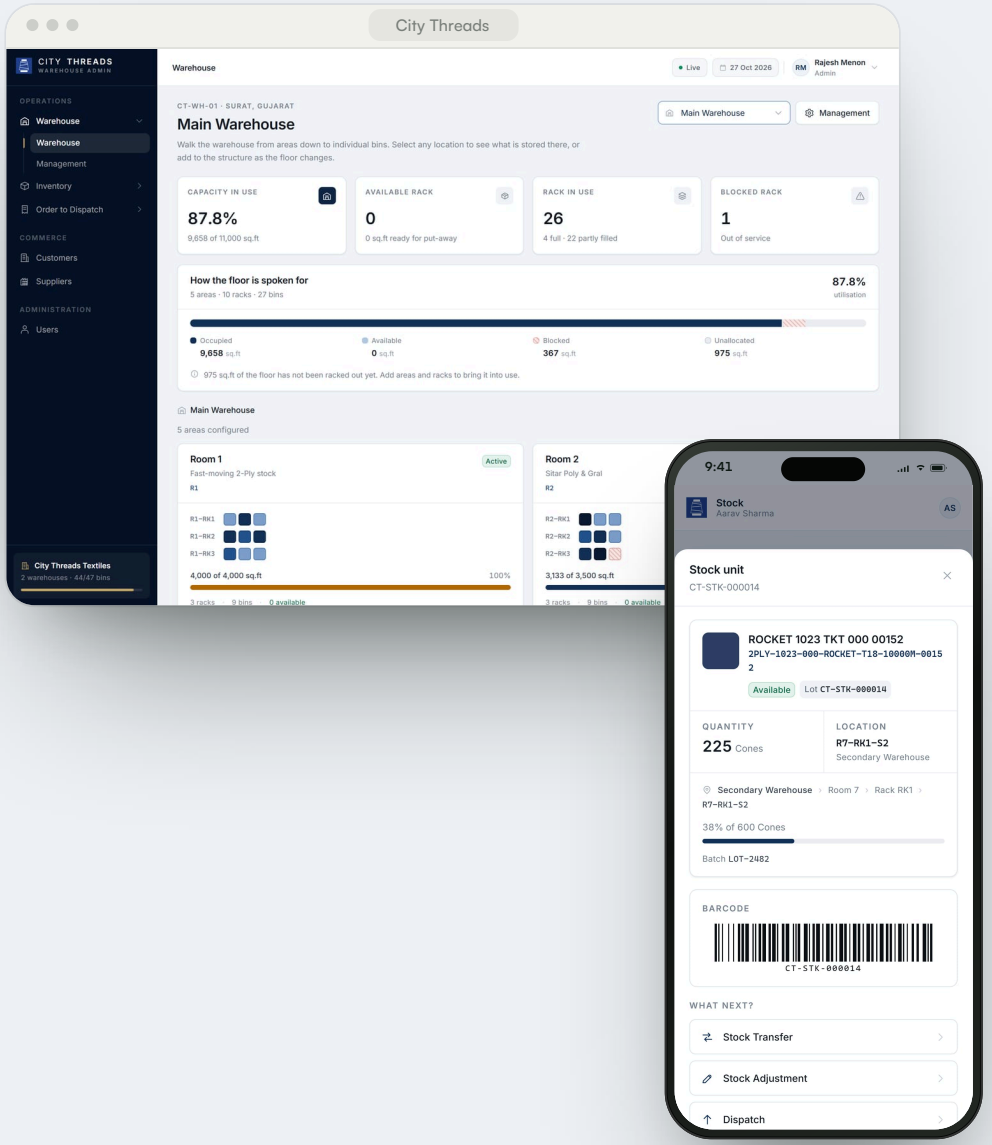

Two warehouses. A fragmented inventory process.

City Threads stores thread stock across racks and bins in two warehouses. With a fragmented, manual process, finding a lot, knowing which space was free and tracing what moved where took time — and depended on the people who remembered.

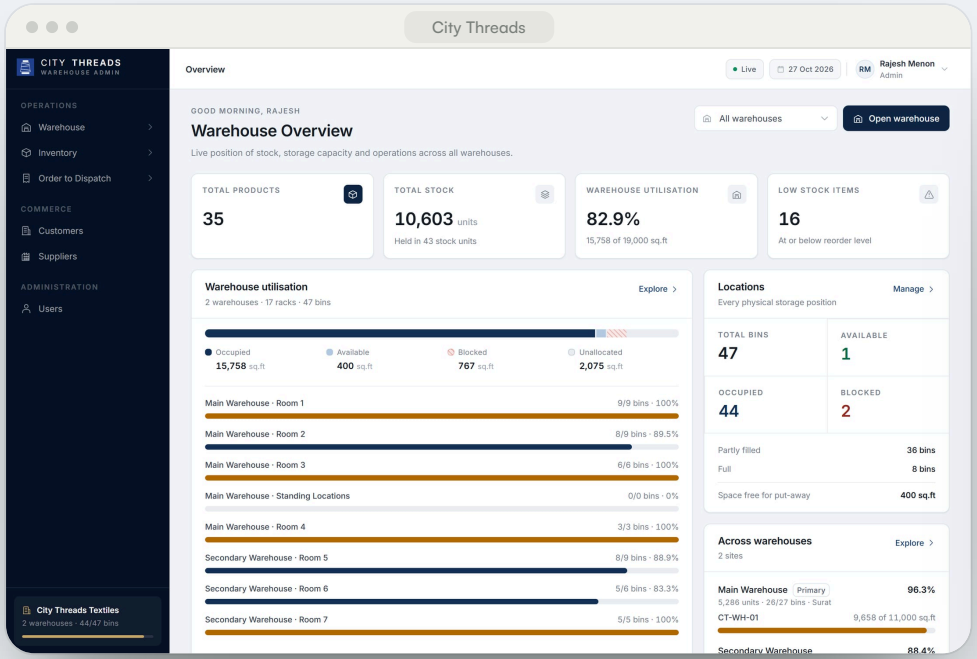

WHAT WE BUILT

A barcode on every lot. A map of every bin.

Crita built a warehouse system where every physical lot becomes a stock unit with a permanent ID and barcode. Administrators manage the structure, orders and stock from a desktop workspace; executives receive, move, count, pick and dispatch from their phone — scanning instead of searching.

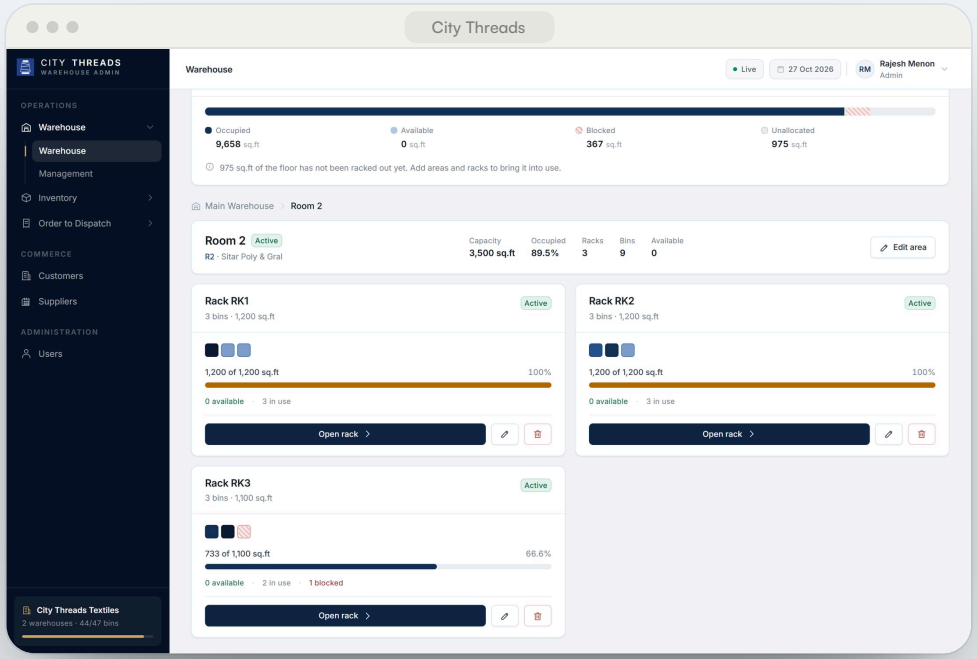

Inside City Threads.

01

The whole operation, live

Stock, utilisation, locations, count discrepancies and recent sales across both warehouses.

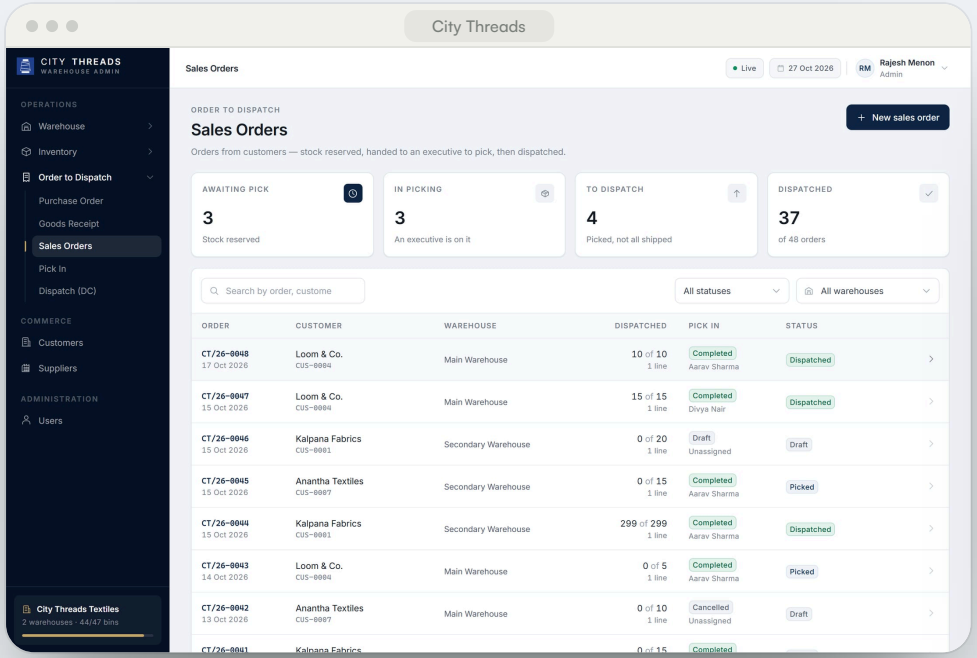

02

Area, rack, bin

A visual map of the floor: capacity, occupancy and blocked locations at every level.

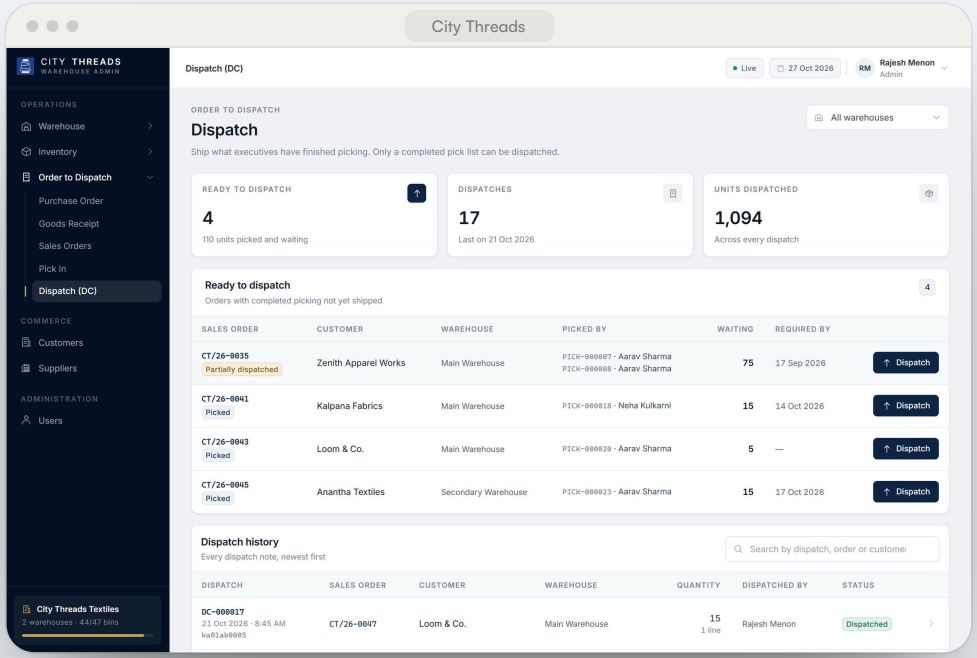

Inside City Threads.

03

From order to truck

Sales orders move through picking to dispatch, with every quantity reserved and accounted for.

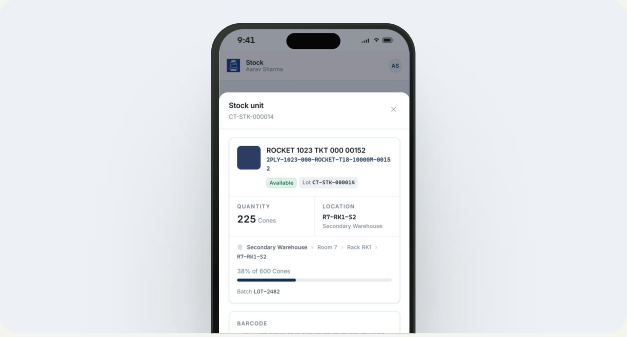

04

Dispatch with proof

Ready-to-ship orders and a full dispatch history with vehicle numbers and who sent what.

KEY CAPABILITIES

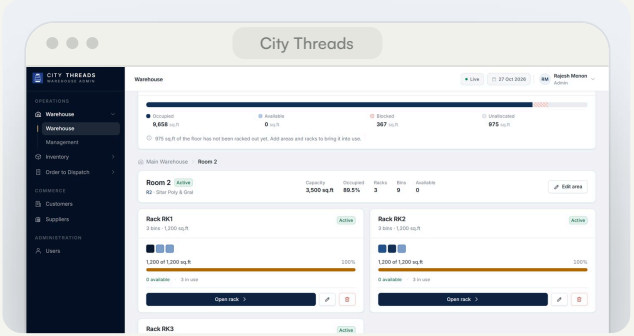

What City Threads does.

01

Barcoded stock units

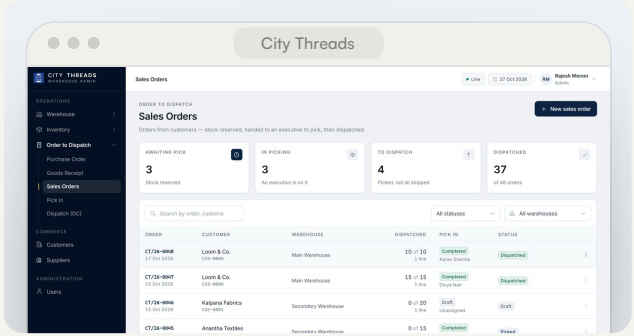

Every lot gets a permanent Stock ID and Code 128 barcode. Scan it with the phone camera, upload a photo or type the ID.

02

Warehouse explorer

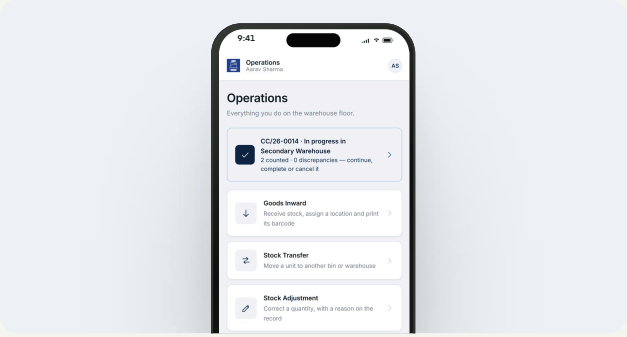

Walk area → rack → bin to see capacity, occupancy and blocked locations, and change the structure in place.

03

Order to dispatch

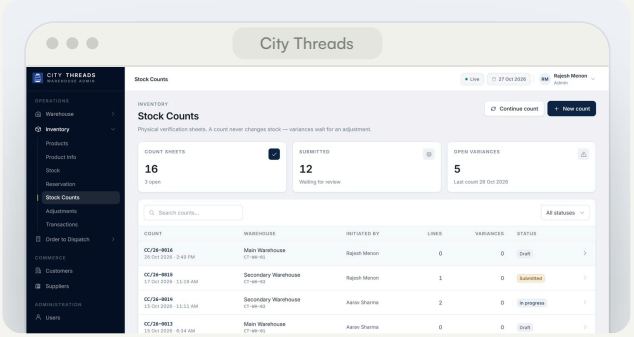

Purchase orders and goods receipts in; sales orders, pick lists and dispatch out — with stock reserved on the way.

04

Floor operations on the phone

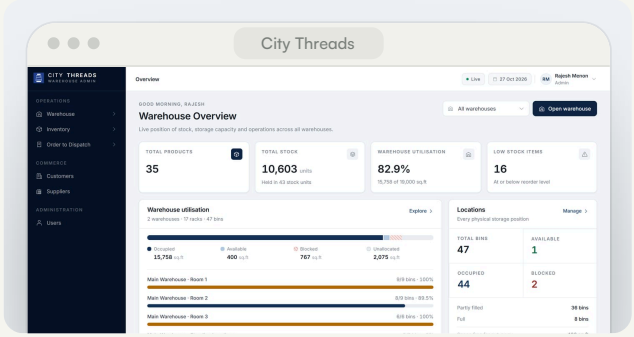

Goods inward, transfer, adjustment, cycle count, picking and dispatch — built for one hand.

05

A ledger that reconciles

Every movement is recorded. Counts verify the shelf without changing stock; differences are corrected with a reason.

06

Commercial visibility

Customers, suppliers, sales and executive performance alongside stock.

ROLE-BASED EXPERIENCE

Built for every role.

DESKTOP WORKSPACE

Administrator

Sees and shapes the whole operation.

- Overview of stock, utilisation and recent operations
- Warehouse structure: areas, racks and bins
- Purchase orders, sales orders and dispatch
- Customers, suppliers and users

MOBILE APP

Warehouse Executive

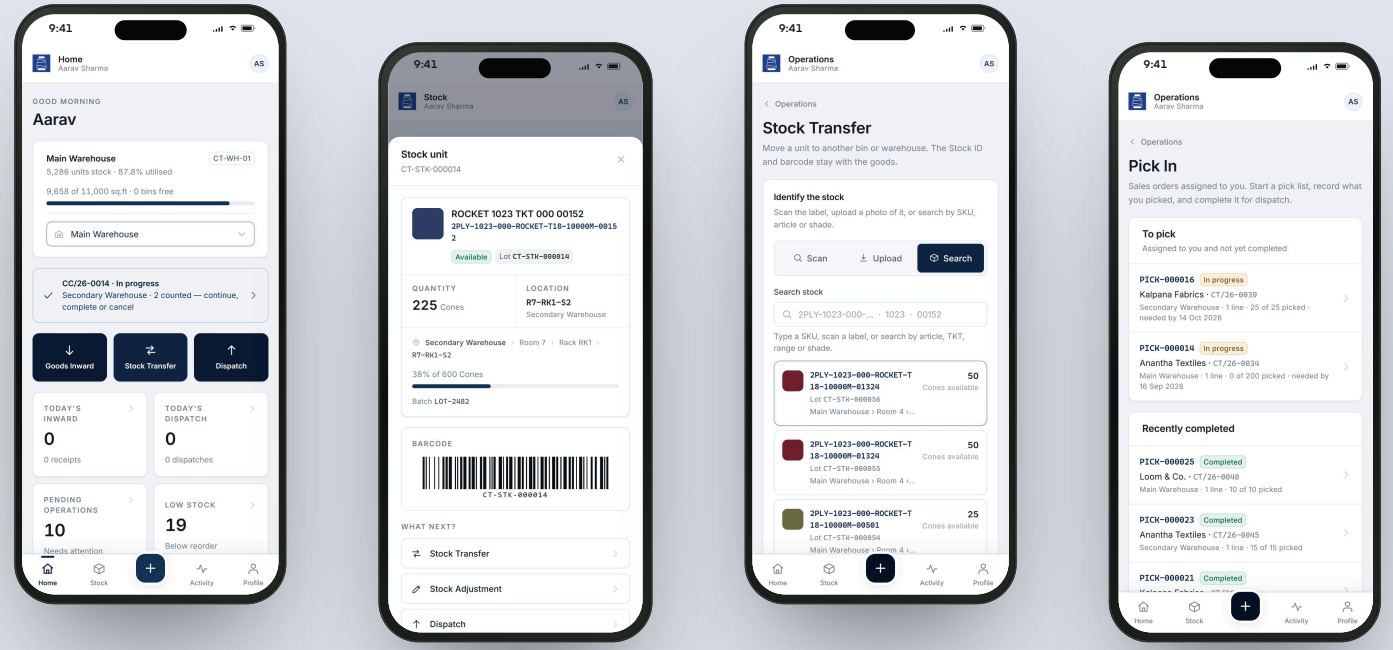

Works the floor, one-handed.

- Home with capacity and today's operations
- Inward, transfer, adjustment, count, pick and dispatch
- Scan or search any stock unit
- Personal activity history

RESPONSIVE EXPERIENCE

One hand on the phone. One on the stock.

Executives scan, confirm and move on — inward, transfer, count, pick and dispatch. Administrators plan and review from the desktop.

BUSINESS VALUE

What it changes for the business.

Find any lot, instantly

Scan a label to see what it is, where it is and what to do next.

Plan space with confidence

Utilisation and free capacity are visible before put-away.

Fewer errors on the floor

One identification flow for every operation; counts never change stock silently.

Real-time visibility

Stock and operations across both warehouses, as they happen.

> **“CRITA helped us replace a fragmented inventory process with a much more organised and efficient system. The application gave our team better visibility, reduced manual work, and made it easier to track inventory in real time.”**
>
> **Sreyash** · City Threads

TECHNOLOGY & DELIVERY

Next.js · React · PostgreSQL · Cloudflare Workers · Code 128 barcodes · Android app

- Camera scanning through the browser’s native barcode detector, with manual entry always available
- Bins are released only when stock reaches zero — enforced in one place
- Served from Cloudflare’s global edge network
